

SURFACE ONE: PUBLIC, NO CREDENTIAL

ghost:circle-boats (public)
ghost://circle-boats/about from business_profile
ghost://circle-boats/hours from business_profile
ghost://circle-boats/availability from availability
ghost://circle-boats/menu from qr_menu
ghost://circle-boats/contact from business_profile
tools: read_about, read_hours, read_availability, read_menu, read_contact,
check_availability

SURFACE TWO: PRIVATE, TOKEN BOUND TO A MEMBERSHIP

without a token: unauthorized
owner token -> acting as owner, 12 tools
staff token -> acting as staff, 2 tools
staff sees: availability.search, availability.hold (asks)
script-only on the owner surface: channel.push
the same token cannot see another business. the same person, different business,
different tools.

THE LINKS PAGE

sections rendered: Hours | Check Availability | Menu
every one is a projection from an installed app, not a hand-written page
page size: 6.5 kb, zero outbound links to a booking platform

A VISITOR PICKS A DATE

intent rows before: 0
searched 2026-08-25 for 2 -> 2 matches
Single Seater 09:00:00-13:00:00 \$150 4 left
Double Seater 14:00:00-18:00:00 \$200 2 left
searched 2026-08-30 for 6 -> 0 matches

what the business now knows, which the booking platform would have kept:
links 2026-08-25 party 2 2 matched booked
links 2026-08-30 party 6 0 matched did not book
the 6-person request on the 30th found nothing. that is a demand signal, and it
is theirs.

THE SAME SECTION AS AN EMBED

/embed/circle-boats/availability -> 0.8 kb fragment

same projection, dropped into the business's own website. one source, three places.
